The image shows a SOVOL SV06 3D printer, a desktop-sized machine with a black frame and blue accents. It is printing a colorful, multi-layered unicorn figurine on its build platform. The printer has a camera mounted on top for monitoring prints. The background is a gradient of purple and blue.

## Parameters:

Model	SV06
Interface Language	English
Print size	220mm*220mm*250mm
Build Plate Size	235mm*235mm
Print Method	TF card, USB connection
Layer Thickness	0.1-0.4mm (Adjustable)
Nozzle Diameter	Standard 0.4mm ( Adjustable)
Recommend Print Speed	≤80mm/s
Recommend Nozzle Temperature	≤260c (for beginners) ≤300c (for experienced people who wanna trying high temp material)
Bed Temperature	≤100c
Material Diameter	1.75mm
Support File Format	G-code
Machine Weight	9 kg
Machine Dimension	496.94mm *387.90mm*610.91mm
Package Size	525mm*540mm *220mm
Package Weight	10.4 kg
Voltage	input 115v/230v50/6Hz    Output 24v
Operation System	Windows/ Mac/Linux

## Features:

1. All metal planetary direct drive extruder
2. All metal hotend setup
3. Auto leveling
4. PEI build plate. The PEI coated build plate is flexible, the prints can be removed easily without any tool. The bed is solid, not easy to get scratches even in long-term printing.
5. Sovol self-developed mainboard, 32 bit, with TMC 2209 drivers, makes the printer works stably and silently. UART mode is available, more modification can be done easily for advanced users(not recommend beginners to modify).
6. G34 auto Z align. As UART mode is opened on SV06 mainboard, and G34 updated, SV06 has G34 auto Z align function. If you want to level X axis, all you need to do is click auto Z-align,the printer will process X-axis leveling automatically. Save time and effort.
7. 220\*220\*250mm build volume, enough for daily use and household use.
8. G34 auto Z align.Dual Z-axis.Dual Z-axis screws and stepper motors improve the accuracy and precise of nozzle's vertical movement with a specified Z-axis accuracy of 0.001mm.
9. Belt tensioner
10. Resume printing.

# Sovol New Budget SV06

## 220\*220\*250 Build Volume

220\*220\*250mm print size, enough for daily use and household use.

## Auto Leveling

SV06 uses inductive sensor to detect the metal print bed with 25 points automatically and compensate the unevenness of the heated bed. The fast, smart and precise detection and compensation to help you get the bed leveled perfectly and get an fantastic first layer.

## All Metal Planetary Direct Drive Extruder

Sovol Self-developed All Metal Direct Drive Extruder with planetary gear set, provide the printer with higher drive ratio and a lighter motor, helps to achieve more accurate extrusion.

## G34 Auto Z Align

As UART mode is opened on SV06 mainboard, and G34 updated, SV06 has G34 Auto Z Align function.

If you want to level X axis, all you need to do is click Auto Z-Aligh, the printer will process X-axis leveling automatically. Saves time and effort.

## Belt Tensioner

The big belt tensioner with Sovol lightning sign, very cool, and comfortable to adjust the belt tension to achieve smooth printing result.

## 32 Bit Silent Board

Sovol Self-developed Mainboard, 32 bit, with TMC 2209 drivers, makes the printer works stably and silently. UART mode is available, more modification can be done easily for advanced users.( Not recommend beginner to modify.)

## PEI Build Plate

The PEI-coated Build Plate is flexible, the prints can be removed easily without any tools. The bed is solid, not easy to get scratches even in long-term printing.

## Dual Z axis

Dual Z-axis screws and stepper motors improve the accuracy and precision of nozzle's vertical movement with a specified Z-axis accuracy of 0.001mm.

## Resume Printing

The resume printing function can make the printer continue printing perfectly after a power outage.
